

Name: Pinnu Himaja

RegistrationNumber: 23MIS7069

Course: IBM Agentic AI

BatchName: Agentic AI - 12

Question:

ABC Technologies is a SaaS company that provides cloud-based business management software to thousands of customers worldwide.

The company receives a large volume of daily support requests covering product information, technical issues, billing queries, account management, and refund requests.

All requests are currently handled manually by support executives, resulting in longer response times and higher operational costs. To improve efficiency, the company wants to build an AI-Powered Customer Support Automation System using LangGraph.

Screenshot of Outputs for all Test Cases:

Query 1:

What are the pricing plans available for your software?
